About Fenugreek

Fenugreek is scientifically known as *Trigonella foenum-graecum*. It is native to the Mediterranean, Europe, and Asia. It is used as a herb (dried or fresh leaves), spice (seeds), and vegetable (fresh leaves, sprouts, and microgreens).

In one first-century A.D. recipe, the Romans flavored wine with fenugreek. The seeds of Fenugreek are an everyday household staple in India and have high nutritional value. It is a tradition to use fenugreek seeds to relieve pain and other diseases.

A number of preclinical and clinical investigations still study on the versatile benefits of Fenugreek Seed except for antidiabetic, antihyperlipidemic, traditional libido boost, analgesic effects, etc., which makes the demand for Fenugreek Seed supplements popular than ever and more and more people tend to apply Fenugreek Seed to animal feed.
